

Quality policy – Chr. Olesen Pharma API division

Customer satisfaction and thus the Pharmaceutical Quality of the delivered products is the focus of our Pharma API division's policy.

Through good contacts with manufacturers, the Pharma API division of Chr. Olesen can ensure and positively influence the Quality of the distributed products.

The Pharma API division management represents the policy that adequate Quality in trade in the European Union can only be guaranteed if the GMP respectively GDP regulations and corresponding product documentation are carried out - as those are binding for our major markets.

The management understands their activity as a partner of manufacturers and customers and as their mediators. In addition to the typical commercial aspects, regulatory and pharmaceutical-technical support is to be provided, which is provided through the know-how of its employees. This support directly serves the product Quality.
